

Membrane Filtration Systems

GEA Filtration is a world-leading supplier of Micro-, Ultra-, Nano-, and Reverse Osmosis Membrane Filtration Systems to the Dairy Industry.

Dairy Process application know-how includes:

- Concentration of milk products
- Demineralization of milk products
- Production of whey and milk protein concentrates
- Protein standardization of milk for cheese production
- Removal/reduction of BOD from evaporator condensate and RO/NF permeate
- Brine recovery
- Bacteria removal from milk products
- Dairy wastewater treatment
- CIP chemical recovery

When it comes to dairy processing, don't just look for components. Look to the company that understands your total process and provides complete system solutions. Look to GEA Filtration!

Leading Technologies. Individual Solutions.
